INTERACTIVE END-OF-CHAPTER EXERCISES

BROWSER CACHING

Consider an HTTP server and client as shown in the figure below. Suppose that the RTT delay between the client and server is 10 msecs; the time a server needs to transmit an object into its outgoing link is 1 msecs; and any other HTTP message not containing an object has a negligible (zero) transmission time. Suppose the client again makes 60 requests, one after the other, waiting for a reply to a request before sending the next request.

Assume the client is using HTTP 1.1 and the IF-MODIFIED-SINCE header line. Assume 60% of the objects requested have NOT changed since the client downloaded them (before these 60 downloads are performed)

QUESTION LIST

1. How much time elapses (in milliseconds) between the client transmitting the first request, and the completion of the last request?

SOLUTION

1. (RTT * NUM_PACKETS) + (NUM_PACKETS * (PERCENT__NOT_CACHED / 100) * TRANS_DELAY) = (10 * 60) + (60 * ((100-60) / 100) * 1) = 624 ms

QUESTION 1 OF 1

How much time elapses (in milliseconds) between the client transmitting the first request, and the completion of the last request?

Answer

CHECK HINT SKIP

We gratefully acknowledge the programming and problem design work of John Broderick (UMass '21), which has really helped to substantially improve this site.
