INTERACTIVE END-OF-CHAPTER EXERCISES

UDP MULTIPLEXING AND DEMULTIPLEXING

In the scenario below, the left and right clients communicate with a server using UDP sockets. The same socket at the server is used to communicate with both clients. The Python code used to create the sockets is shown in the figure. Consider the four transport-layer packets – A, B, C and D – shown in the figure below.

QUESTION LIST

1. What is the source port # for packet D?

2. What is the destination port # for packet D?

3. What is the source port # for packet C?

4. What is the destination port # for packet C?

5. What is the source port # for packet A?

6. What is the destination port # for packet A?

7. What is the source port # for packet B?

8. What is the destination port # for packet B?

SOLUTION

1. The source port for packet D is port 5896.

2. The destination port for packet D is port 5240.

3. The source port for packet C is port 5240.

4. The destination port for packet C is port 5896.

5. The source port for packet A is port 5299.

6. The destination port for packet A is port 5896.

7. The source port for packet B is port 5896.

8. The destination port for packet B is port 5299.

QUESTION 1 OF 8

What is the source port # for packet D?

Answer

CHECK | HINT | SKIP

We greatly appreciate the work of John Broderick (UMass '21) in helping to develop these interactive problems.
